

1. Which of the following statements are true about a Django app? Select all that apply.

1 / 1 punto

- ☐ A Django app must have at least one model in it.
- ☒ There can be more than one app in a Django project.

✓ **Correcto**  
Correct! A single project may have one or more apps.

- ☒ A Django app is reusable.

✓ **Correcto**  
Correct! A Django app can be installed in more than one project. An example is Django's Admin app which can be a part of many projects.

- ☐ The app package folder contains a **settings.py** file where app-specific configuration is defined.

2. Can the startapp command be used with the **django-admin** utility?

1 / 1 punto

- ☒ Yes
- ☐ No

✓ **Correcto**  
Correct! The **startapp** command option is available with Django-admin and the **manage.py** script.

3. Which of the following are features of a view? Select all that apply.

1 / 1 punto

- ☒ A view is a user-defined function.

✓ **Correcto**  
Correct! It is a user-defined function in the **views.py** file under the app folder.

- ☒ A view is mapped to a URL pattern.

✓ **Correcto**

Correct! You need to specify which URL pattern invokes a particular view. This mapping is defined in the **urls.py** file of the app.

- ☐ The view returns only an HTML response.
- ☒ The request object is the mandatory argument for the view function.

**Correcto**

Correct! The view function receives the request command from the server context and processes the request data, namely parameters and the body.

4. Which of the following statements about the **urls.py** file in the app folder is false? Select all that apply.

1 / 1 punto

- ☐ The **urls.py** file is not present in the app folder by default.
- ☒ The **urls.py** file at the app-level is included in the **urlpatterns** list of the project.

**Correcto**

Correct! The URL definitions of the apps installed in the project must be included in the project-level **urls.py** file.

- ☐ The URL patterns in the app are defined with the **path()** function.
- ☒ The **urls.py** in the apps folder is the same as **urls.py** in the project folder.

**Correcto**

Correct! Both are different. The app's **urls.py** defines the URL mappings of the views in it. The **urls.py** of the project establishes the base URLs of the site.

5. True or False. While working on multiple setting files in Django projects, django-admin is preferred over manage.py for running the Django commands in the command line.

1 / 1 punto

- ☒ True
- ☐ False

**Correcto**

Correct! django-admin command is preferred in such cases as it allows you to give specific settings with the help of environment variable `DJANGO_SETTINGS_MODULE`
