

1. Were you able to complete the code and get the expected final output mentioned?

1 / 1 punto

☒ Yes

☐ No

Correcto

Very well done ! Keep practicing!

2. What was the part that you were not able to complete? Specify the line numbers in the 8 lines of code.

1 / 1 punto

The expected code for the program is as follows:

```
1 class MyFirstClass():
2     print("Who wrote this?")
3     index = "Author-Book"
4     def hand_list(self, philosopher, book):
5         print(MyFirstClass.index)
6         print(philosopher + " wrote the book: " + book)
7 whodunnit = MyFirstClass()
8 whodunnit.hand_list("Sun Tzu", "The Art of War")
```

☐ 2

☒ None

☐ 3

☐ 1

☐ 5

☐ 4

☐ 6

☐ 7

☐ 8

Correcto

3. Which of the following is the class variable in the code above?

1 / 1 punto

- ☐ MyFirstClass
- ☒ index
- ☐ philosopher
- ☐ whodunnit

**Correcto**

Correct! This is the class variable as it is declared within the class

4. How will you modify the code below if you want to include a “year” of publication in the output?

1 / 1 punto

```
1 class MyFirstClass():
2     print("Who wrote this?")
3     index = "Author-Book"
4     def hand_list(self, philosopher, book):
5         print(MyFirstClass.index)
6         print(philosopher + " wrote the book: " + book)
7 whodunnit = MyFirstClass()
8 whodunnit.hand_list("Sun Tzu", "The Art of War")
```

Ejecutar

Restablecer

Insert your suggestions below

modificando la funcion y pasarle el año por parametro

**Correcto**

Modify line numbers 4, 6 and 8 such as:

```
def hand_list(self, philosopher, book, year):
```

```
print(philosopher + " wrote the book: " + book + "in the year " + year)
```

```
whodunnit.hand_list("Sun Tzu", "The Art of War", "5th century BC")
```
