

1.What data type is the variable x ?

1 / 1 punto

```
1  
2   var x = {};  
3
```

- ☐ Function
- ☐ Array
- ☒ Object

Correcto

That's correct! {} is the array literal.

2.What will be the output of running the following code?

1 / 1 punto

```
1   try {  
2     console.log('hello')  
3   } catch(e) {  
4     console.log('caught')  
5   }
```

- ☒ Uncaught SyntaxError: Invalid or unexpected token.
- ☐ Caught

Correcto

Correct, you cannot handle SyntaxErrors in JavaScript using a try catch block.

3.What value is printed when the following code runs?

1 / 1 punto

```
1  
2   var burger = ["bun", "beef", "lettuce", "tomato sauce", "onion", "bun"]  
3   console.log(burger[2]);  
4
```

- ☐ bun

- ☐ beef
- ☒ lettuce
- ☐ tomato sauce
- ☐ onion

Correcto

That's correct! Indices start at 0. Therefore `lettuce` will print out as it is at index 2.

4. In the following code, how many methods does the `bicycle` object have?

1 / 1 punto

```
1
2   var bicycle = {
3       wheels: 2,
4       start: function() {
5
6       },
7       stop: function() {
8
9       }
10    };
11
```

- ☐ 1
- ☒ 2
- ☐ 3

Correcto

That's correct! `wheels` is a property and `start` and `stop` are methods.

5. When the following code runs, what will print out?

1 / 1 punto

```
1
2   try {
3       throw new Error();
4       console.log('Hello');
5   } catch(err) {
6       console.log('Goodbye');
7   }
8
```

☐ Hello

☒ Goodbye

Correcto

That's correct! When the error is thrown, the code will execute the code inside the catch statement.

6. If you mis-type some code in your JavaScript, what kind of error will that result in?

1 / 1 punto

☐ RangeError

☒ SyntaxError

☐ TypeError

Correcto

That's correct!

7. Will the following code execute without an error?

1 / 1 punto

```
1
2   function add(a, b) {
3     console.log(a + b)
4   }
5
6   add(3, "4");
7
```

☒ Yes

☐ No

Correcto

That's correct! Although the code has a bug, it will execute without error. Instead of adding the numbers and printing 7, it will print 34.

8. What will be printed when the following code runs?

1 / 1 punto

```
1
2   var result;
3   console.log(result);
4
```

☒ undefined

☐ null

☐ 0

Correcto

That's correct! Since no value was assigned to `result`, `undefined` will print out.

9.What will be the output of the following code?

1 / 1 punto

```
1 var str = "Hello";  
2 str.match("jello");
```

☒ null

☐ undefined

☐ empty string

Correcto

That's correct! Since the string "Hello" doesn't contain the string "jello", it cannot be matched, and thus an array object with the matching result cannot be created. Hence, the return value is null, signaling the absence of a matching result.

10.What will be the output of the following code?

1 / 1 punto

```
1 try {  
2   Number(5).toPrecision(300)  
3 } catch(e) {  
4   console.log("There was an error")  
5 }
```

☐ RangeError

☐ 5

☐ e

☒ "There was an error"

☒ **Correcto**

Correct! The *catch block* will execute and print because of the Range error.
